Online Result and Examination System.

→ Introduction:

The online examination and result system is a web based full stack application developed to digitize the complete examination process. The system eliminates the manual tasks such as paper-based exams, physical evaluation, and delayed result publication. The application supports Admin, Teachers and students providing each role with secure and role-specific functionalities.

→ Purpose of System:

- Conduct objective and subjective online tests
- Automate evaluation and result publication.
- Provide a secure, role based community communicating platform.
- Reduce manual effort and paperwork
- Ensure transparency, accuracy, and efficiency in examination.

→ Stakeholders:

⇒ Students - Appear for exams, view schedules and results, participate in community.

⇒ Faculty - Create tests, evaluate answers, publish results, manage communities

⇒ Admin - Manage users, control communities, moderate communication.

⇒ College/Institution - Uses the system for conducting exam

⇒ Developing Team - Design, develop, test and maintain the system.

→ Functional Requirements:

The system shall allow -

1. ~~Allow~~ students, faculty and admin to log in using role-based authentication.

2. Faculty to ~~store~~ schedule examinations to create objective and subjective tests.
3. Automatic evaluation of objective questions and faculty to evaluate subjective answers.
4. faculty to publish examination results.
5. students to attempt online examination and shedules.
6. students to access community.
7. faculty to communicate with admin, students other faculty member using community.
8. Admin to moderate community (Creation, Deletion
9. Admin to Manage accounts of each user, respect to creation, deletion and modification
10. The system to store, manage and allow users view examination results and performance

→ Non-functional Requirements:

1. The system should be available 24/7, except during maintenance.
2. Exam data and results must be secure and confi
3. The system should support multiple users simult
4. The interface should be simple and user frien
5. The system should not lose exam data even during failure.

→ Constraints:

1. Examination must be attempted only within pre-defined schedule, and the system must automatically terminate and submit the test once the time limit expires.

DATE :
PAGE NO.

2. A student is allowed to attempt an examination only once per scheduled time.
3. System functionalities are strictly ~~permitted~~ restricted based on user roles.
4. Subjective responses can't be auto evaluated and must be assessed only by authorized faculty.
5. User account creation, deletion and modification along with community-level moderation, can be performed only by the admin.

→ Use-Case:

Use case name - Attempt timed online examination

Actor - Student

Precondition -
- student is registered in the system
- student is logged in
- Examination is scheduled and currently active.
- Student has not already attempted the exam.

Main flow -
- Student logs into the system
- Student views the list of exams.
- Students selects an available exam.
- System displays exam instructions and rules.
- Student starts the exam
- students answers exam question.
- Student submits the exam, if the timer expires, the system automatically submits the exam.
- System saves the responses securely.
- System displays submission confirmation. Student responses are stored securely and exam is marked as completed or auto-submitted
